

# HICARB

Simple, Economical, Effective Odor Control

## HICARB Odor Control Advantages

**HICARB** Odor Control Systems are designed for controlling vapor phase H<sub>2</sub>S (hydrogen sulfide) odors in low concentrations at sewage lift stations or plant headworks. These up-flow vessels contain a specially formulated non-impregnated H<sub>2</sub>S specific media that effectively removes 99% of H<sub>2</sub>S as well as other organic and mercaptan odors. Our media has an H<sub>2</sub>S removal capacity 4 to 5 times greater than virgin carbon media, which provides substantial operating cost savings over virgin carbon media. The outlet is via a ½" x 360° raised lid, which eliminates the need for an outlet vent stack. A quite corrosion-resistant cast aluminum blower with a 2-HP stainless steel washdown duty motor is included. Media replacement is simple and spent media is safe for disposal in a municipal landfill. **HICARB** comes with our exclusive 3-year system warranty, offering peace of mind.
